

H2O Bob Special General Specifications Length: 15' Beam: 36" Rocker: .5" Weight: 36lbs

H2O's Bob Special 15 is based on the Chestnut Canoe Co.'s classic design, with some slight modifications to increase overall flatwater efficiency. A shallow arch hull with slight rocker combines to provide the secure, no-surprises feeling that infrequent or entry-level canoeists prefer. A shallow shoe keel aids tracking and provides a bang plate against grounding, while still retaining a lively nature for more aggressive paddlers. Faster and lighter than most 15's, H2O's Bob Special is ideally suited for use as a tandem or solo day-tripper, with capacity large enough to handle long weekend outings.
